

Chapter Nineteen

Vaccination

he pernicious aftereffects of vaccination upon the system are similar to those of the various serum and antitoxin treatments.

Jenner, an English barber and chiropodist, is usually credited with the discovery of vaccination. The doubtful honor, however, belongs in reality to an old Circassian woman who, according to the historian Le Duc, in the year 1672 startled Constantinople with the announcement that the Virgin Mary had revealed to her an unfailing preventive against the smallpox.

Her specific was inoculation with the genuine smallpox virus. But even with her [or the Virgin Mary] the idea was not an original one, because the principle of isopathy (curing a disease with its own disease products) was explicitly taught a hundred years before that by Paracelsus, the great genius of the Renaissance of learning of the Middle Ages. But even he was only voicing the secret teachings of ancient folklore, sympathy healing and magic dating back to the Druids and Seers of ancient Britain and Germany.

The Circassian seeress cut a cross in the flesh of people and inoculated this wound with the smallpox virus. Together with this she prescribed prayer, abstinence from meat and fasting for forty days.

As at that time smallpox was a terrible and widespread scourge, the practice of inoculation was carried all over Europe. At first the operation was performed by women and laymen; but when vaccination became popular and people were willing to pay for it, the doctors began to incorporate it into their regular practice.

Popular superstitions run a very similar course to epidemics. They have a period of inception, of virulence and of abatement. As germs and bacteria become inactive and die a natural death in their own poisonous excreta, so popular superstitions die as a natural result of their own falsities and exaggerations.

It soon became evident that inoculation with the virus did not prevent smallpox, but, on the contrary, frequently caused it; and therefore the practice gradually fell into disuse, only to be revived by Jenner about one hundred years later in a modified form. He substituted cowpox virus for smallpox virus.

Modern allopathy, in applying the isopathic principle, gives **large and poisonous doses** of virus, lymph, serums and antitoxins, while homeopathy, as did ancient mysticism, applies the isopathic remedies in **highly diluted and triturated doses** only.

From England vaccination gradually spread over the civilized world and during the nineteenth century the smallpox disease (variola) constantly diminished in virulence and frequency until today it has become of comparatively rare occurrence.

“Therefore vaccination has exterminated smallpox,” say the disciples of Jenner.

Is that really so? Is vaccination actually a preventive of smallpox? This seems very doubtful when the advocates of vaccination themselves do not believe it. “What,” I hear them say, “we do not believe in our own theory?” Evidently you do not, my friends. If you believe that vaccination protects you against smallpox, why are you afraid of catching it from those who are not vaccinated? If you are thoroughly protected, as you claim to be, how can you catch the disease from those who are **not** protected? Why do you not allow the other fellow to have his fill of smallpox and then enjoy a good laugh on him? The fact of the matter is you know full well that **you are not safe**, that you can catch the disease just as readily as the unprotected.

German statistics are more reliable than those of any other country. In the years of 1870-71 smallpox was rampant in the Fatherland. Over 1,000,000 persons had the disease, and 120,000 died. Ninety-six percent of these had been vaccinated and only four percent had not been protected. Most of the victims were vaccinated, once at least, **shortly before they took the disease**.

In 1888 Bismarck sent an address to the governments of all the German states in which it was admitted **that numerous eczematous**

diseases, even those of an epidemic nature, were directly attributable to vaccination and that the origin and cure of smallpox were still unsolved problems.

In this message to the various legislatures the great statesman said: "The hopes placed in the efficacy of the cowpox virus as a preventive of smallpox have proved entirely deceptive."

Realizing this to be a fact, most of the German governments have modified or entirely relinquished their compulsory vaccination laws.

"But," our opponents insist, "you cannot deny that smallpox has greatly diminished since the almost universal adoption of vaccination."

Certainly the disease has diminished. But so have diminished and, in fact, nearly disappeared the **plague, the Black Death, cholera, the bubonic plague, yellow fever** and numerous other epidemic pests which only recently decimated entire nations.

Not one of these epidemics was treated by vaccination. Why, then, did they abate and practically disappear?

Not vaccination, but the more universal adoption of soap, bathtubs, all kinds of sanitary measures, such as plumbing, drainage, ventilation and more hygienic modes of living generally have subdued smallpox as well as all other plagues.

Many of us remember how the yellow fever raged in Havana during the Spanish occupancy. Within two months after the energetic Yankees took possession and gave the filthy city a good scouring, yellow fever had entirely disappeared—without any yellow fever vaccination. The question is now in order why, of all the dreaded plagues of the past, smallpox alone survives to this day.

The answer is: **on account of vaccination.** If scrofulous and syphilitic poisons were not artificially kept alive in human blood by vaccination, smallpox would by this time be as rare as cholera and yellow fever.¹

Thanks to the oft-repeated compulsory vaccination of every citizen, young and old, we as a nation have become saturated with the smallpox virus. Is it any wonder that every once in a while this

¹ It was not too long ago that Dr. Lindlahr was proven right and the vaccination for smallpox was discontinued in most advanced nations because the deaths from the vaccine far outweighed the deaths from the disease.

latent taint breaks out in acute epidemics?

Undoubtedly, the almost universal systematic contamination and degeneration of vital fluids and tissues, not alone with vaccine virus, but also with many other filthy serums, antitoxins and drug poisons, account in a large measure for the steady increase of tuberculosis, cancer, insanity and a multitude of other chronic destructive diseases unknown among primitive people that have not come in contact with the blessings (?) of vaccination.

By weakening the system's reactionary powers against one disease, its reactionary powers against all diseases are weakened. In other words, creating in the body a form of chronic smallpox by means of vaccination favors the development of all kinds of chronic diseases.

Quit sowing the seed, gentlemen, and you will cease reaping the harvest. By the mercurial suppression of syphilis and by means of vaccination **you are perpetuating smallpox**. What has syphilis to do with smallpox? They are very closely related, and similar in appearance, symptomatology and in their effects upon the organism.

A German physician, Dr. Cruwell, who studied the subject thoroughly, says: "Every vaccination with so-called cowpox virus means syphilitic infection. Cowpox is not a disease peculiar to cattle; it is always due to syphilitic or smallpox infection from the diseased hands of human beings. Cowpox pustules have been found only on the udders of milk cows which came in contact with human hands. Cattle roaming in pasture and prairie have never been affected by cowpox, nor have domesticated steers and oxen. If this disease were a disorder peculiar to cattle, both sexes would be equally affected. Jenner's cowpox was caused by the diseased hands of the syphilitic milkmaid, Sarah Nehnes." ²

Vaccination of healthy children and adults is often followed by a multitude of symptoms which cannot be distinguished from syphilis, viz., characteristic ulcers and eczematous eruptions, swellings of the axillary and other lymphatic glands, atrophy of the mammary glands in the breasts of women and of girls above the age of puberty, etc.

This explains the constantly growing demand for "bust foods"

² We have no modern evidence of this connection, but then we have no evidence disallowing it.

and “bust developers.” A perfectly developed bust has become so rare that many hundreds of beauty doctors and of business concerns that make a specialty of developing the flat-bosomed realize thousands of dollars annually. One firm in this city, and a small concern at that, has made from \$2,500 to \$5,000 a year and has over ten thousand names on its constantly increasing list of patrons.³

It is reasonable to assume that almost without exception these ten thousand women had been vaccinated from one to three times before the age of puberty. When this is realized, and the fact that vaccination dries up the mammary glands is taken into account, is it not time to pause and consider?⁴

The figures of this one small concern represent the report of only one out of several hundred such firms doing business in all parts of the country.

Some years ago, a disease similar to smallpox broke out among the sheep in certain parts of Scotland. As a preventive, the sheep were vaccinated. **In the course of a few years it was noticed that a great many ewes were unable to nourish their lambs.** With the discontinuance of vaccination this phenomenon disappeared.

Does this help to explain why nowadays over fifty percent of **human** mothers are incapable of nursing their babies?

Looking Forward

At present the trend of allopathic medical science is undoubtedly toward the serum, antitoxin and vaccine treatment. Practically all medical research tends that way. Every few days we see in the daily papers reports of new serums and antitoxins which are claimed to cure or create immunity to certain diseases.

Suppose the research and practice of medical science continue along these lines and are generally accepted or, as the medical associations would have it, forced upon the public by law. What would be the result? Before a child reached the years of adolescence, it would have had injected into its blood the vaccines, serums, and

³This is most interesting. I wonder what Dr. Lindlahr would have to say about the breast implantations of today.

⁴Do vaccinations affect breast gland development? That is a new concept. It would certainly give many mothers reason to rethink vaccinating their daughters if such a connection could be shown.

antitoxins of smallpox, hydrophobia, tetanus (lockjaw), cerebro-spinal meningitis, typhoid fever, diphtheria, pneumonia, scarlet fever, etc.

If allopathy were to have its way, the blood of the adult would be a mixture of dozens of filthy bacterial extracts, disease taints and destructive drug poisons. [How true.] The tonsils and adenoids, the appendix vermiformis and probably a few other parts of the human anatomy would be extirpated in early youth under compulsion of the health departments.

What is more rational and sensible: the endeavor to produce immunity to disease by making the human body the breeding ground for all sorts of antibacteria and antipoisons, or to create **natural** immunity by building up the blood on a normal basis, purifying the body of morbid matter and poisons, correcting mechanical lesions and by cultivating the right mental attitude? Which one of these methods is more likely to be disease-building, which health-building?

Just imagine what human blood will be like in coming generations if this artificial contamination with all sorts of disease taints and drug poisons is to be forced upon the people! ⁵

⁵ Unfortunately, Dr. Lindlahr's concern has become fact. We are now such a nation. We also have a wide variety of new and disabling ailments afflicting our children that will cripple their later lives. For more information on these subjects we suggest the books, *For Tomorrow's Children* and *The Immune Trio*, by the publisher of this work. We also refer you to the Epilogue at the end of this book. In this I would like to paint a rosier picture of our world and its future health but the elements to implement this are not now in my crystal ball.
